SUMMARY

Data and computer science graduate with hands-on experience turning raw, messy datasets into decisions. Comfortable across the full analysis cycle: SQL extraction, cleaning, statistical evaluation, forecasting and dashboarding for non-technical audiences. Published researcher with a demonstrated record of catching data quality problems before they reach reporting.

EDUCATION

University College Dublin <i>MSc in Data and Computational Science, Grade: 2:1</i>	Dublin, Ireland 2025 – 2026
Sreenidhi Institute of Science and Technology <i>Bachelor's in Computer Science (AI & ML), GPA: 8.9/10</i>	Hyderabad, India 2021 – 2025

TECHNICAL SKILLS

Analysis & Querying: Python, SQL, Pandas, NumPy, Excel, Exploratory Data Analysis, Statistical Testing, Forecasting
Visualisation & BI: Power BI, Tableau, Matplotlib, Seaborn, Plotly, Streamlit Dashboards
Data Handling: Data Cleaning, Validation, Feature Engineering, MongoDB, DuckDB, Structured & Unstructured Data
Modelling: Scikit-learn, Regression, Classification, Time-Series Methods, Model Evaluation
Tools: Git/GitHub, Azure, Docker, Jupyter, FastAPI

EXPERIENCE

Python Developer Intern, AI & Data <i>Intel Unnati</i>	Mar 2024 – Jul 2024 <i>Remote</i>
- Analysed structured datasets with Python, Pandas and SQL to produce insights that fed directly into stakeholder decision-making. - Built interactive Streamlit dashboards allowing non-technical stakeholders to explore datasets and monitor key metrics. - Produced visualisations in Matplotlib, Seaborn and Plotly to communicate data trends and model performance to non-technical audiences. - Applied cleaning, validation and feature engineering to raw datasets before analysis, resolving quality issues at source.	
Freelance AI-Assisted Web Developer <i>Enshire Ltd</i>	Dec 2024 – Mar 2025 <i>Remote, India</i>
- Delivered responsive web applications end to end, translating client requirements into working software through iterative feedback cycles. - Used AI-assisted development tooling to shorten build cycles on small-team client projects while retaining review over generated code.	
Front End Developer Intern <i>Notify Ltd</i>	Oct 2023 – Dec 2023 <i>Remote</i>
Built 15+ reusable UI components in React.js for a production platform, working to design specifications and integrating with backend APIs.	

PROJECTS

Time-Series Forecasting Pipeline <i>Python, Pandas, NumPy, Scikit-learn</i>	GitHub
- Built an end-to-end forecasting pipeline achieving MAE 0.447 and MASE 0.427, roughly 26% of the error of the seasonal-naive baseline. - Engineered lag, rolling-window and calendar features, and validated with rolling-origin backtesting to rule out look-ahead leakage. - Documented the full evaluation methodology and baseline comparison in a public repository.	
EMR Analysis and Disease Prediction <i>Python, Scikit-learn, Gemini API, Streamlit, Azure</i>	GitHub
Built an end-to-end diagnostic system at 87% classification accuracy, pairing Scikit-learn on structured symptom data with Gemini for unstructured EMR and lab reports.	

- Applied retrieval-style reasoning so the model maps document patterns to structured outputs for downstream prediction.
- Deployed as a live Streamlit application on Azure, taking the project from prototype through to a running service.

Wildlife Species Recognition | *Python, Computer Vision, MSc Project*

UCD

- Owned the data pipeline and evaluation methodology for a computer-vision species classification system built with a project partner.
- Identified a location-based train/test split defect that was inflating reported accuracy by eleven percentage points; corrected the split and rebuilt the evaluation.
- Added automated validation checks to the pipeline so the same class of leakage could not recur in later experiments.

Algorithmic Trading using Machine Learning | *PyTorch, Gymnasium, Transformers, NLTK*

Publication

- Trained reinforcement learning agents (PPO, DQN, A2C) in PyTorch and Gymnasium, reaching 92% strategy accuracy across simulated market conditions.
- Evaluated strategies against risk-adjusted benchmarks; published as first author in a peer-reviewed journal.

PUBLICATION

Konda, S. *Algorithmic Trading using Machine Learning*. International Journal of Scientific Research in Engineering and Management (IJSREM). First author, peer-reviewed. [Read the paper](#).

ACCOMPLISHMENTS

NodeBrew 2024 Hackathon: 1st Place Overall, plus Best Accessibility & Inclusivity Award

MLH TechTogether 2023: 3rd Place Overall, plus Best Sustainability Hack

MLH Waffle Hacks 2023: Best Use of MongoDB Atlas
